Protecting the Future*

## **Southwestern White Pine (*Pinus strobiformis*)**

Southwestern white pine grows in Arizona, New Mexico and southwest Colorado. It is not native to Nebraska. Needles are in groups of 5, soft, dark to bluish green, 2 -4 inches long, and tips are often finely toothed. Bark is thin, rough, and furrowed. Young trees tend to be rather dense and symmetrical and pyramidal in shape. Its mature form tends to be open and irregular. It is more heat and drought tolerant than eastern white pine. White pine blister rust is a problem in southwestern white pine's native range.

## **Colorado Blue Spruce (*Picea pungens*)**

Adapts to medium to coarse textured soils. Prefers full sun, but can tolerate some shade. Does well in moist areas and can not withstand extended drought conditions. A slow-growing tree, it can often reach heights of up to 100 ft. Often used in Christmas tree plantings.

## **Small Acreage Package For Eastern Nebraska**

*For landowners that want to  
plant trees, but don't want  
25 of one kind.*

## **White Swamp Oak (*Quercus bicolor*)**

Swamp white oak is native to the central and southern United States. It grows best on moist, bottomland forested soils. It is a large tree with specimens over 60 feet tall. The tree is valuable for wildlife habitat and for its wood. The wood is used in fine furniture, flooring, and wine casks.

## **Redosier Dogwood (*Cornus sericea*)**

An open-spreading, multi-stemmed, medium to large shrub for farmstead, field wind-breaks and riparian plantings. Horizontal branches at base. Fruit and twigs are used by several species of wildlife: robins, cedar waxwings, rabbits and deer. Provides dense cover for several wildlife species.

## **Serviceberry (*Amelanchier alnifolia*)**

Also called Juneberry and Saskatoon, the Serviceberry is popular for its good tasting fruit similar to blueberry in looks and taste. It is a slow-growing, mid to tall, thicket forming shrub that blooms in late spring. Big game browse on the leaves and twigs while songbirds and upland game savor the fruit. Leaf spots, rust and pear slugs can be problematic.
